GRAPH IT!

2. You can graph any function without a graphing calculator. Just use a table of values and plot the points. So, do NOT graph this function in your calculator, rather fill in the table, plot the points and make a sketch.

x	y
-7	
-5	
-3	
-1	
0	
1	
3	
5	
7	

$$y = \frac{x^2 - 2x - 8}{x^2 + 1}$$

Find the roots of the quadratic function in the numerator. These are also the roots of the entire function because zero divided by anything is zero. Plot and label these points on your graph.

VERTICAL MOTION An object that travels up and down is modeled by the quadratic function below:

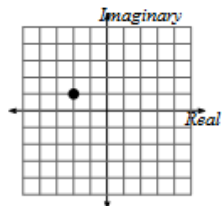

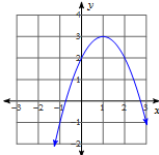

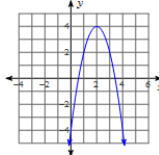

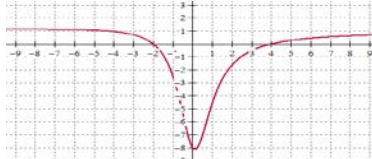

$$h(t) = -16t^2 + v_0t + h_0$$

h = height of object (feet), t = time (seconds), v_0 = initial velocity of object (ft/sec), h_0 = initial height of object (feet)

3. Sarah stands on 20 foot rooftop and throws up her skateboard with an initial velocity of 40 ft/sec.
